

TATIANA PATRUSHEVA

BI & Analytics Lead | Microsoft Fabric · Power BI · Semantic Modelling · Data Governance · Applied AI

Microsoft Certified: SQL AI Developer Associate (DP-800)

Milton Keynes, UK | 07535 294935 | patrushevtatiana@gmail.com | [LinkedIn](#) | [Portfolio](#)

Right to work in the UK — no sponsorship required

PROFILE

BI & analytics lead working across Microsoft Fabric, Power BI, data architecture, semantic modelling and applied AI. At ACO Technologies, I am the client-side technical authority for a Fabric migration, defining the target architecture, capacity design, data and modelling requirements, and the build specification for the external engineering team, with final sign-off for go-live. I am also leading the redesign of a legacy single-table reporting estate into a star schema and governed semantic layer. Recent results include an 80% reduction in Power BI capacity usage, refresh times cut from around 70 minutes to 8, 30% of reports retired, and platform support brought fully in-house.

WORK EXPERIENCE

- ACO Technologies** | Shefford, UK, global group — **Power BI Business Analyst** **Nov 2025 – Present**
- **Microsoft Fabric migration:** client-side technical authority for the migration — selected the engineering supplier, defined the target architecture, capacity design and build requirements, review and test delivery, and hold final client-side sign-off for go-live.
 - **Data architecture & modelling:** leading the redesign of a legacy single-table reporting estate into a dimensional star schema and governed semantic layer. Defined the target data structure and specified a pipeline-based architecture, and solved a cross-region Dynamics 365 mirroring constraint with a second F2 capacity in the reporting region.
 - **Reporting governance:** used report usage and column- and measure-level lineage to establish what was actually needed. Secured named business owners and chaired the reviews that retired 30% of reports, removed 40% of pages from those retained, and identified reporting gaps.
 - **Platform operations:** own the existing Azure platform through the transition, monitoring and troubleshooting Azure Data Factory pipelines and Databricks jobs and maintaining separate development and production environments.
 - **Legacy analysis & AI:** use LLM tooling to help recover poorly documented business logic, trace joins and calculations, map required data back to source systems and produce the documentation the engineering team builds from. Validate the output against source systems rather than trusting the legacy model or AI output. Also the first point of contact for business AI questions, working with Group IT on capabilities and controls.
 - **Cost, performance & supplier management:** rebuilt core Power BI semantic models, cutting capacity consumption from about 4M to 800K CU (~80%) and refresh time from around 70 minutes to 8. Brought platform support in-house, reducing external support spend to zero, and built the Fabric business case projecting a further 50% reduction in platform running costs. Currently manage external engineering delivery.
- Skanska** | Durham, NC, USA — **Analytics Developer (progressed from Data Visualization Specialist)** **Jun 2023 – Sep 2025**
- **Semantic modelling:** built governed semantic models integrating 15+ source systems across datasets of 5M+ records, reducing reconciliation issues by 30% and improving reporting efficiency by 50%; used DirectQuery where live source access was required.
 - **Business reporting & metrics:** worked with Finance, HR and Operations to standardise KPI definitions and reporting logic, and built 30+ dashboards used by leadership and project teams across **\$1B+ of construction projects**.
 - **Enablement & standards:** mentored 5+ Citizen Developers building on shared semantic models, reviewing DAX, modelling and reports against Power BI best practice and organisational standards.
 - **Security & access:** implemented complex row-level security across shared semantic models, including static and dynamic roles, email-based filtering and multi-role dynamic RLS.
 - **AI & automation:** developed machine-learning, forecasting and LLM-based tools using Python, TensorFlow and OpenAI APIs, reducing manual analytical and reporting effort by approximately 40%.
- Eridge Underwriting** | Tunbridge Wells, UK — **Data & Business Services Assistant** **Apr 2022 – Oct 2022**
- **Data analysis & automation:** analysed insurance data using R, Power BI, QlikView and Excel to identify the cause of declining broker performance; automated weekly reporting, reducing manual effort by 30%.
- Earlier career:** biotechnology engineering, cancer research and mobile application QA before moving into data science and analytics.

KEY COMPETENCIES

BI & Analytics: Power BI (DAX, Power Query, Semantic Models), Row-Level Security (RLS), DirectQuery, Paginated Reports (SSRS), Data Storytelling

Data Architecture & Modelling: Microsoft Fabric, Dimensional Modelling (Kimball / Star Schema), Semantic Layer Design, OneLake, Azure Data Factory, Databricks, Azure SQL, SQL Server, ETL/ELT Pipelines

Governance & Platform: Data Governance, Data Lineage & Metadata Analysis, Reporting Governance, Data Quality, Release & Environment Management, Capacity & Cost Optimisation, Power Automate

AI & Applied ML: LLMs, OpenAI APIs, RAG, Vector Search & Embeddings, Retrieval Evaluation, Responsible AI, AI-Assisted Data Analysis & Documentation, Agentic AI, TensorFlow, Time-Series Forecasting

Programming: Python, SQL, DAX, R, GitHub

Leadership & Ways of Working: Technical Authority & Standards, Stakeholder Management, Supplier Selection & Management, Business Cases, Requirements Translation, Mentoring & Enablement, Agile

EDUCATION & PROFESSIONAL DEVELOPMENT

General Assembly — Data Science Fellow: Python, machine learning, predictive modelling, built an MRI image-classification application

Mendeleyev University of Chemical Technology, Moscow — Engineer's Degree (5-year), Biotechnology

Certification: Microsoft Certified: SQL AI Developer Associate — DP-800 (2026)

Professional development: Agentic AI Level 1 – Fundamentals (SuperDataScience, 2026);

Fabric Analyst in a Day (Pragmatic Works, 2025);

Plan, Create and Deliver Your Data Story (Storytelling with Data, 2024)

SELECTED AI PROJECTS

- VoC Risk Scorecard — Voice-of-Customer risk pipeline using SQL Server vector search over reviews, support chats and tickets; measured retrieval precision and recall against a hand-labelled corpus instead of trusting similarity scores, exposing failure modes a naive RAG pipeline hides. Microsoft SQL AI Promptathon, 2026.
- Subreddit Pulse — deployed agentic app turning any subreddit into a structured digest; GPT-4o-mini with domain-locked tool retrieval, grounding rules against fabrication, and explicit handling of missing evidence.
